

Cloud Kitchen Insights

✓ Positive Insights

1. Pizza Brand is Kitchen's Star Performer

- Highest CM% at **17.65%** across all brands
- Consistent performance across all platforms (29%, 32%, 38%)
- High order volume too (8K) so it's not just margin, it's scale

2. Healthy Bowl Brand is a Hidden Gem

- Second highest CM% at **14.51%** despite lower order volume (5K)
- Suggests lean food cost and strong pricing worth investing in

3. Brunch & Lunch Slots are Most Profitable

- Brunch: **9.50%** | Late Night: **8.99%**
- These slots likely have lower discounting or higher-margin orders

4. Zone A & Zone B Dominate Volume AND Margin

- Both zones have 13K+ orders each
- Zone A CM% is **16.33%**, best delivery geography

5. Weekend Orders are Strongest

- Sunday & Saturday both at **0.14M CM**, slightly ahead of weekdays
- Good signal for weekend-specific promotions

Cloud Kitchen Insights

✖ Negative Insights

1. Burger Brand is Bleeding Money: Critical Issue

- Overall CM% just **0.20%**, practically zero margin
- Breakfast slot is actively **loss-making at -21.30%**
- Commission Drain of **2.16M** is likely hitting Burger Brand hardest

2. Zone D and Zone E are Loss-Making

- Zone D: **-4.41%** | Zone E: **-12.33%**
- Either delivery costs are too high or discounting is aggressive in these zones

3. Food Cost at **70.09%** is Dangerously High

- Industry benchmark for cloud kitchens is ideally **50-55%**
- This is compressing overall CM to just **8.65%**

4. Total Discount of **1.64M** is Hurting Bottom Line

- Combined with 2.16M commission drain, Cloud Kitchen is losing **3.80M** in value leakage

5. Friday is Worst Day

- Lowest CM contribution at **0.10M**
- Could indicate low orders + high discounting on Fridays
